

ABSTRACT

A computer mouse system and method of using is presented whereby the computer mouse system is used in conjunction with laptop or notebook computers or with external or auxiliary mouse, and with external or auxiliary computer keyboards. Each embodiment having touch pads, glide points, touch screens, or touch panels, integrated into the touch pads, glide points, touch panels, or touch screens by building, molding, manufacturing. The touch pads, glide points, touch screens, or touch panels, can also be placed at alternative locations on any of the mouse systems.
